

WEAVERLINE

The Weaverline “Hay Special” Option

Because of the increased interest among some dairy farmers to include dry hay in their TMR, Weaverline has developed the “Hay Special” option to feed this material. The challenge of feeding this material is that long cut hay is very prone to wrapping on the beaters. This problem has been greatly reduced with specially designed augers and anti-wrap shields. This “Hay Special” option is available on all Weaverline models.

A cart full of TMR with dry hay in the mix.

The beaters after unloading that cart full. Notice there is very little material on the augers.

The long hay is evident in this photo of feed hanging on the edge of the trough.
